Elevate your business

The process of modernizing your data center to meet the demands of today's digitally empowered customers is a journey. Along the path, there are several milestones to achieve, from becoming more cost-effective and secure to the higher levels of agility and automation. During the CBTS Transformation Workshop, our primary goal is to work with you to determine where your organization is today and where you want to be in the future.

Because the workshop is specific to your company, the duration is determined by size and technologies. In the end, you will have a strategic road map to reach your desired destination.

cbts

DEVOPS
Increase collaboration and provide an efficient feedback loop between the development and operations teams.

DIGITAL TRANSFORMATION

In today's modern enterprise, there is tremendous pressure to engage customers actively and provide more personal experiences while continually improving and innovating products and services. That's where technologies like AI can be used to their full potential.

CBTS brings a holistic approach to digital transformation, analyzing and accessing each organization's current data center environment, and providing a path for modernization.

**BENEFIT:** Increase agility, scalability, and security needed to innovate and grow.

APPLICATION MICRO-SERVICES
Use container and micro-service technologies, requiring frequent release cycles, to drive innovation and agility.

CBTS delivers the infrastructure, open APIs, and application environments to help developers increase productivity.

BENEFIT: Get the most out of networking, storage, and security across all applications, be it in traditional, cloud-native, or hybrid environments.

HYBRID DATA CENTER
Leverage private and public clouds to deliver agility and address line-of-business demands seamlessly and securely.

CBTS helps your IT teams connect applications across clouds and devices securely.

BENEFIT: Achieve compliance, availability, and consistency while working within budget constraints.

CBTS helps connect your teams for faster delivery and increased reliability in production while automating repetitive tasks.

BENEFIT: Focus on improving applications instead of spending a majority of time on maintenance.

DATA CENTER MODERNIZATION
Transforming your data center for today's digital economy.

CBTS brings proven expertise in Data Center Infrastructure Management, Workflow Process Management, Service Management, Hybrid Cloud, Workload Segmentation, and Containerization solutions.

BENEFIT: Promote innovation and drive growth.
